

Awesomeshell Pathelet

Version: 1.0

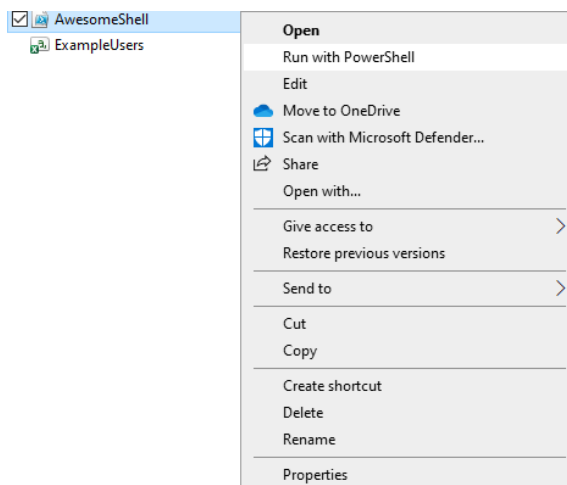

Creator: Jacob Taylor

1. Introduction:

In today's age you never know who is invading your privacy, that's why you must protect and manage users very carefully. In Awesomeshell we do just that, by managing user passwords and retrieving information that could help prevent a cyberattack. This pamphlet will guide you through how to use Awesomeshell.

2. How to open Awesomeshell:

1. Navigate to the folder that contains Awesomeshell
2. Left click then right click the file named "Awesomeshell"
3. Then click the "Run with Powershell" option

3. Main Menu:

```
Windows PowerShell

Select which option you want to preform:
1.Create a report of all stale users (enter '1')
2.Create a report of all expired passwords (enter '2')
3.Create a report of all locked accounts (enter '3')
4.Update a user's password (enter '4')
5.Exit (enter 'e' or 'E')
Input option here:
```

Option 1:

Explanation: This option gives a full report of all users in the company's system that have not logged in 7 days or more.

1. To activate this function enter "1" then press the "enter" key
2. The accounts will be viewed with usernames assigned to a number
3. Press "enter" after reading through all of the stale accounts to return back to the main menu

Option 2:

Explanation: This option gives a full report of all users in the company's system that have not changed their password in 30 days or more.

1. To activate this function enter "2" then press the "enter" key
2. The accounts will be viewed with usernames assigned to a number
3. Press "enter" after reading through all of the Users with expired passwords to return to the main menu

Option 3:

Explanation: This option gives a full report of all users in the company's system that have a locked account

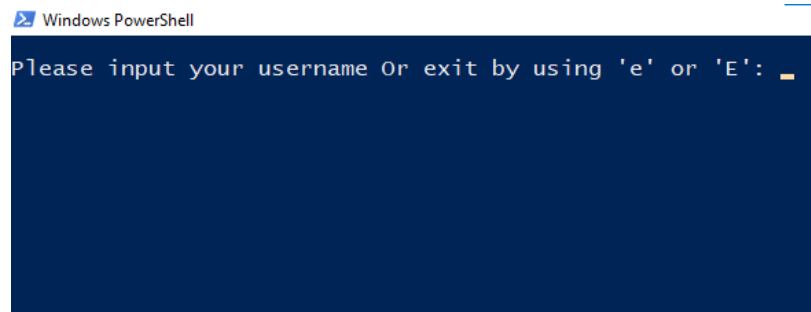

Note: Locked accounts are defined as accounts that have had many failed log in attempts

1. To activate this function enter “3” then press the “enter” key
2. The accounts will be viewed with usernames assigned to a number
3. Press “enter” after reading through all of the locked accounts to return to the main menu

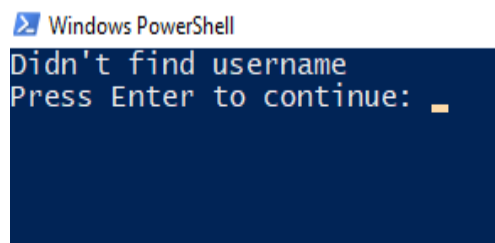

Option 4:

Explanation: This option changes a user's current password by manual input.

1. To activate this function enter “4” then press the “enter” key
2. Enter a username that's assigned to an account, make sure it's accurately typed and press “enter” or exit the function by using ‘e’ or ‘E’

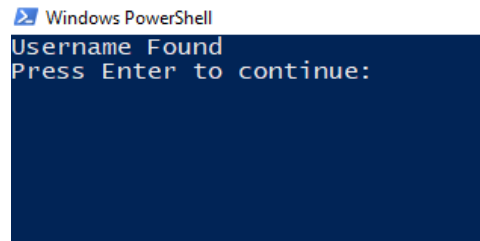

- 2.1. If a inputted username could not be found press enter to try again

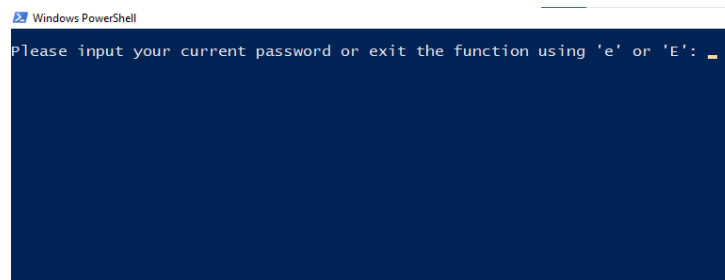

3. Once the username is correctly inputted it will display “Username Found”,

press “enter” to continue in the function

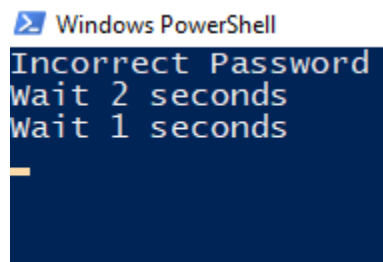

```
Windows PowerShell
Username Found
Press Enter to continue:
```

4. The current password assigned to this account must be entered next or exit the function by entering ‘e’ or ‘E’

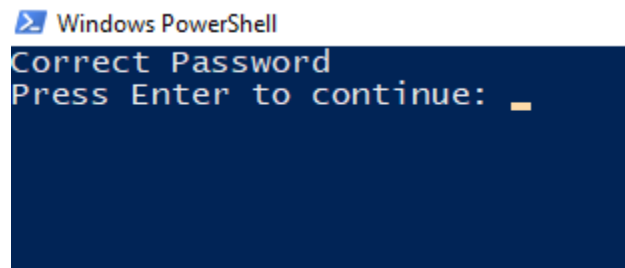

```
Windows PowerShell
Please input your current password or exit the function using 'e' or 'E':
```

4.1. If the wrong password is inputted, 2 seconds must pass before a password can be re-entered

```
Windows PowerShell
Incorrect Password
Wait 2 seconds
Wait 1 seconds
```

5. Once the correct password is entered, “Correct Password” will be displayed, press “enter” to continue

```
Windows PowerShell
Correct Password
Press Enter to continue:
```

6. The password can now be changed for the account that was entered, make sure to carefully read the requirements for the new password that will be made, once done press “enter” or exit the function by using ‘e’ or ‘E’

```
Password must contain:  
8 characters up to 16 characters  
2 capital letter characters  
2 lowercase letter characters  
1 special character  
1 number character  
Please input your new password exit the function by using 'e' or 'E': _
```

Note 1: characters are defined as any typable thing

Note 2: special characters are defined as a non-number or non-letter character

6.1. If the password entered does not meet the requirements for the password, it will display what is missing in the new password, correct those issues and press “enter”

```
Corrections needed to password:  
Not enough Capital letters  
Not enough special characters  
Not enough numbers  
Password must contain:  
8 characters up to 16 characters  
2 capital letter characters  
2 lowercase letter characters  
1 special character  
1 number character  
Please input your new password exit the function by using 'e' or 'E': D_
```

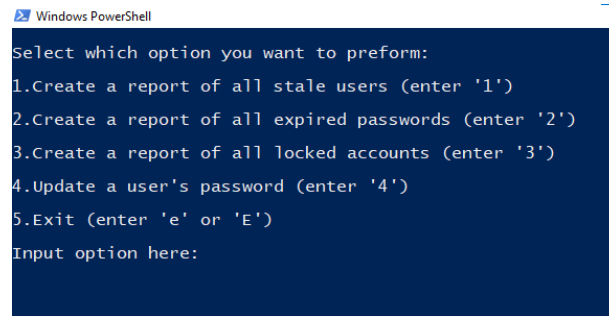

7. Once a password with all the requirements is entered, press “enter” to leave the function and return to the main menu

```
Windows PowerShell  
Password change Success  
Press Enter to continue:
```

Option 5:

Explanation: This option Exits the program

1. Type 'e' or 'E' and press "enter" to activate the function

A screenshot of a Windows PowerShell terminal window. The window has a dark blue background and a title bar that says "Windows PowerShell". The text inside the terminal is white and lists five options for the user to select. The options are: 1. Create a report of all stale users (enter '1'), 2. Create a report of all expired passwords (enter '2'), 3. Create a report of all locked accounts (enter '3'), 4. Update a user's password (enter '4'), and 5. Exit (enter 'e' or 'E'). Below the list, it says "Input option here:". The terminal is currently empty, with no input or output shown.

```
Windows PowerShell

Select which option you want to perform:
1.Create a report of all stale users (enter '1')
2.Create a report of all expired passwords (enter '2')
3.Create a report of all locked accounts (enter '3')
4.Update a user's password (enter '4')
5.Exit (enter 'e' or 'E')
Input option here:
```
